

STRATA SECURITY

WHO WE ARE

Engineering-First Cybersecurity

Strata Security designs, builds, assesses, and sustains secure software systems — for federal technical teams, prime contractors, and commercial customers alike. Founder-led since 2025, with more than a decade of direct engineering and federal offensive-security experience behind it.

How Strata Approaches the Work

01

Evidence Over Assumption

Every finding is grounded in direct analysis of the artifact — not inferred from documentation alone.

03

Root Cause, Not Symptoms

Understanding why a weakness exists matters more than cataloging where it appears.

05

Actionable by Design

Every finding pairs with a remediation approach that can actually be implemented.

02

Security as a Design Constraint

Treated as an engineering requirement from the outset, not a compliance step applied after delivery.

04

Direct Practitioner Delivery

The engineer who scopes an engagement is the engineer who performs it.

CORE TECHNICAL CAPABILITIES

Eight Domains, One Engineering Practice

Secure Software Engineering

Application Security

DevSecOps

Vulnerability Research

Mobile Security

Cloud Security

Reverse Engineering

Defensive Engineering

Five Differentiators

01

Engineering-First

Every engagement is an engineering problem to solve, not an audit to complete.

03

Direct Practitioner Model

The engineer who scopes the work is the engineer who performs it — no account layer.

05

Long-Term Partnership

Engagements are structured to continue as ongoing technical advisory where useful.

02

Founder-Led

Over a decade of direct reverse engineering and vulnerability research experience.

04

Research-Backed Engineering

Offensive research and defensive engineering treated as one connected discipline.

FINAL OBJECTIVE

Let's Start the Conversation

Strata is positioned to support federal technical teams and prime contractors who need direct engineering depth for mission-focused and high-assurance programs — not another vendor layer between them and the work.
